

Puppet Enterprise Download

Set up your trial in four easy steps

Installing Puppet Enterprise is straightforward for most developers or admins. Setup time can vary depending on your operating environment and whether you have an existing Puppet license.

Let's walk through each of the steps below to get running ASAP. Get more details [from our documentation](#).

Want to try Puppet Enterprise in the cloud? Skip this download and try [AWS Opsworks for Puppet Enterprise](#).

Tip: To download the installer directly to the node that will be your primary server, you can use these commands:

```
wget --content-disposition 'URL '
```

```
curl -JLO 'URL '
```

Step 1: Download Puppet Enterprise binary for your platform

Scroll down to view a full list of all **Puppet Enterprise 2019.8.5 primary servers and agents**. [Previous Puppet Enterprise versions](#) are also available for download.

Step 2: Check system requirements

Refer to these system requirements for Puppet Enterprise installations.

- [Hardware requirements](#): these hardware requirements are based on internal testing.
- [Supported operating systems](#): Puppet Enterprise supports various operating systems depending on the role a machine assumes in your infrastructure.
- [Supported browsers](#): the following browsers are supported for use with the console.
- [System configuration](#): before installing Puppet Enterprise, make sure that your nodes and network are properly configured.

Step 3: See [Getting started with Puppet Enterprise](#) to install PE, add your content, and start configuring your infrastructure.

Step 4: Get additional help

Upgrading Puppet Enterprise? Get [detailed instructions for upgrading](#) to the latest version.

Need to license more nodes? Please [contact sales](#) to find out more about how to buy.
